

Changes to FTP Access Effective March 19, 2007

If you use the <ftp.uuhsc.utah.edu> service to update websites and either work from home or from outside the hospital network please continue reading. You may be affected by a security improvement to FTP services effective March 19, 2007.

If you use FTP from inside the network, you will not be affected and no action is required.

To check whether you are outside the network, try visiting the Intranet website. Without using the VPN or the Applications Portal, click on the following link to the Intranet:

<http://intranet.uuhsc.utah.edu> (or cut and paste this URL into your browser such as Internet Explorer or Netscape.)

If you can view this page, you will not be affected and **no further action** is required. If you **cannot** view the Intranet, you **WILL** be affected and need to make a security change to continue using the FTP service without interruption.

You have until March 19th to make the needed changes. Please visit the Web Resource Center's FTP website shown below to determine what action is best for your situation.

FTP Website Link: <http://uuhsc.utah.edu/wrc/community/department/ftp.html>

Thank you for helping ensure a more secure network environment.
