MORE ROOM FOR HEALING AND HOPE
Huntsman Cancer Institute celebrates the opening of the expanded cancer hospital, which provides state-of-the-art facilities to twice as many cancer patients.

INHERITED COLON CANCER RISK DEFINED
Huntsman Cancer Institute researchers influence national screening guidelines with their discovery that familial history has more to do with risk than previously known.

BREAKTHROUGHS IN BREAST CANCER
From the lab to the operating room, Huntsman Cancer Institute researchers explore genetic risks of breast cancer, how it spreads, and new treatment possibilities.

STATEWIDE IMPACT—AND BEYOND
Collaborative efforts enable Huntsman Cancer Institute to reach patients across Utah and throughout the Intermountain West.

NANOTECHNOLOGY HELPS DETECT PANCREAS CANCER
Using particles 5,000 times smaller than the strand of a spider’s web, researchers build systems to catch early signs of the disease.

NEW GENOMICS TECHNOLOGY AT HCI
Quick, accurate DNA analysis opens novel realms of cancer research.

BMT UNIT RELOCATES
Patients and providers celebrate the new unit, which brings life-saving treatment in a comfortable setting to more people than ever.

20 YEARS AND COUNTING
A sarcoma patient calls herself the “luckiest woman in the world” after surviving cancer and experiencing a dream come true.

PITCHING IN TO FIND A CURE
Funding efforts and generous donors play a key role in cancer research.

HCI SCIENTISTS RECEIVE NATIONAL RECOGNITION
HCI researchers influence national screening guidelines with their discovery that familial history has more to do with risk than previously known.

HCI moves science from the lab to the patient bedside with more than 200 clinical trials open at a given time.

In 2011, approximately 16 percent of HCI patients participated in a clinical trial, compared to a national average of less than 5 percent.

Huntsman Cancer Institute is part of the University of Utah Health Care system, which ranked in the top 10 of all medical centers in the country in 2011—for the second year in a row. This ranking was given by the University HealthSystem Consortium’s Quality and Accountability Study.

To date, these major building projects have been completed as part of HCI’s “cancer campus.”

In 2011, approximately 16 percent of HCI patients participated in a clinical trial, compared to a national average of less than 5 percent.

Huntsman Cancer Institute has 159 distinguished faculty researchers, including 2007 Nobel Laureate Mario Capecchi, PhD.

In 2011, HCI and its investigators received $79.5 million in grant funding to support cancer research.

Each year, more than 1 million people access our award-winning website for cancer research and care information: www.huntsmancancer.org.
